

# Screen SHADES

**Camera Bellows has achieved over 100 years of ground breaking work within the photographic industry. Building on this vast experience, we have extended our range of bellows to encompass applications within the scientific, industrial and I.T. industries.**

**We offer consultation, design and high-quality manufacture of bellows, we can guarantee to make bellows to virtually any individual requirement.**

## Laptop Screen SHADE

Ideal for shading reflections in bright conditions, the Laptop Screen Shade gives a clearer view of your laptop screen. If required, it can also screen confidential documents from prying eyes.

Incorporating our unique self-supporting technology, it can be manipulated to the angle required and will remain exactly in position. The soft, lightweight hood can be easily slotted over the back of a laptop screen without the need for awkward fixings. When work is finished, it can be simply folded flat and slipped into a laptop bag.

## Digital Screen SHADE

The Digital Screen Shade has been specially designed for positioning over the picture viewer at the back of a digital camera, thereby shading the displayed image from the sun's glare in bright conditions. Incorporating self-supporting technology, the hood can be manipulated to whichever position is required and will stay rigidly in place.

Designed to fit most sizes of digital cameras, the Digital Screen Shade is also available with either a fixed or 'clip-on' magnifying lens, giving the photographer a more detailed view of images.

## Video Screen SHADE

The Video Screen Shade can eliminate the problems of glare from sunlight, bright lights or reflections on the LCD screen when using a digital camcorder.

Specially designed to fix securely over the monitor of virtually every camcorder which uses an LCD screen viewfinder, it ensures a clear view of the subject and an accurate preview of the picture. Its unique self-supporting technology means that once manipulated, it will stay rigidly in place.

It is available in two sizes to fit most standard camcorders.
