

105mm LANDSCAPE POLARISER

the 100mm system

LEE Filters have now introduced a slimline 105mm Landscape Polariser. This new slimmer polariser will go down to 16mm without vignetting when used with a two slotted filter holder on a full frame 35mm sensor.

However, the Landscape Polariser comes with an added advantage. It has a slightly warm bias, so not only is the photographer able to remove glare from shiny surfaces, or increase the contrast between blue sky and white cloud, they can also enhance the greens, browns and golds that are so often associated with photography in the landscape.

Because the Landscape Polariser screws onto the front of the holder, it leaves both slots in the holder free, allowing the photographer to add further filters of their choice, opening up even more creative possibilities.
